Partnerships for Drought Monitoring in Eswatini

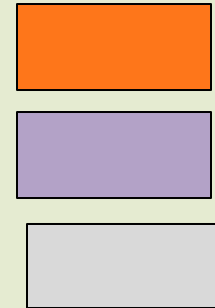

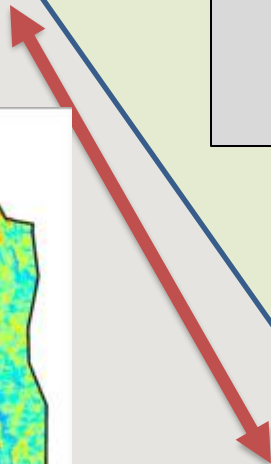

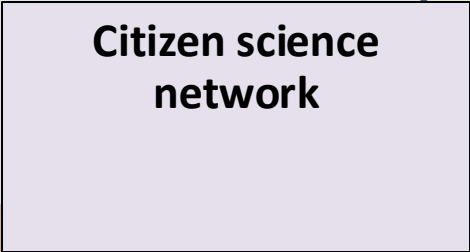

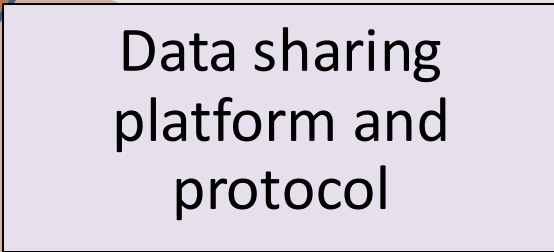

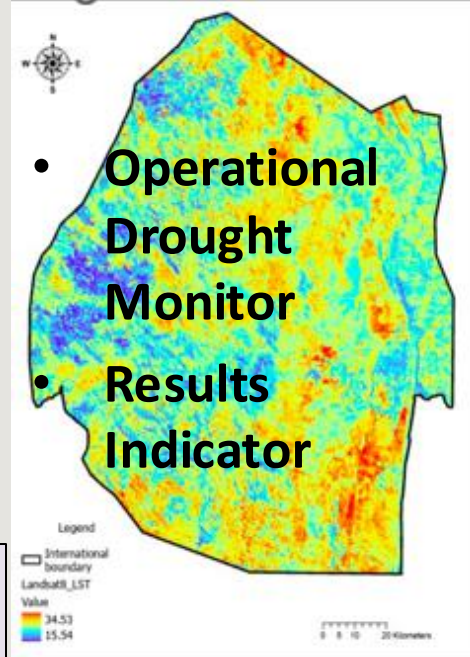

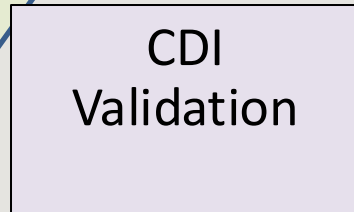

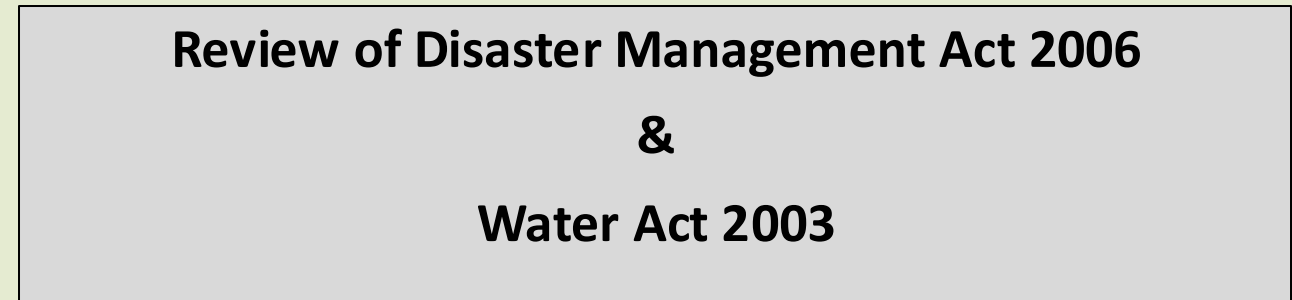

Drought Resilience

High-level Meeting
on **National Drought Policy**

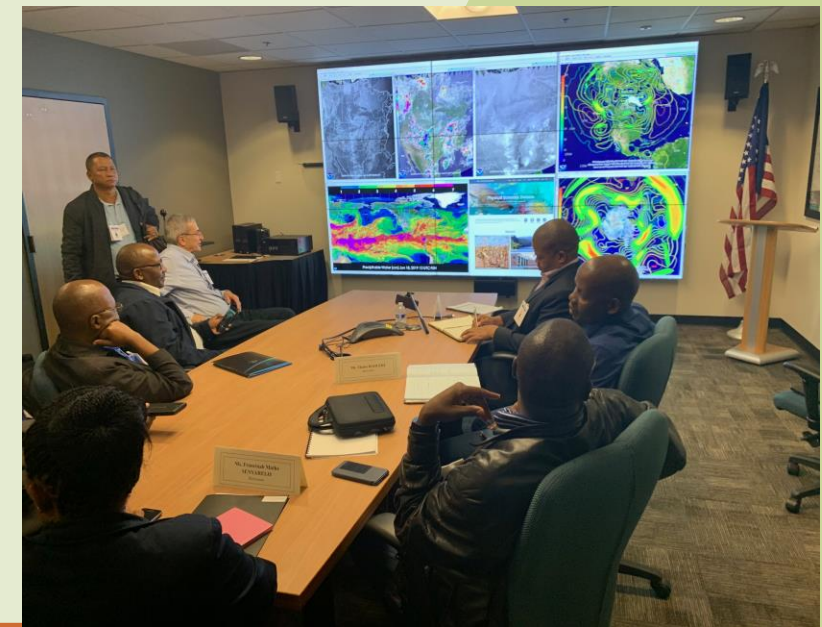

Drought Monitoring Activities linkages

Drought monitor (CDI) related activities

Other drought specific activity

Broader DRM activities with drought included

Conclusion

- Partnerships enable the sharing of resources, knowledge, and best practices, leading to more innovative and context-specific solutions.
- Collaborative efforts among institutions, and local communities enhance the capacity to monitor, and manage drought challenges and success of drought management strategies
- Empowering citizens to participate actively in drought risk management, create a more resilient society capable of adapting to the changing climate -

“Together, we can navigate the challenges of drought and foster resilience in the face of an uncertain future”
