- ➤ GESI Integration into Drought Planning oMogobane SLM Pilot, Botswana oGuyu Chelesa SLM Pilot, Zimbabwe
- Success Key Factors for GESI Integration
- >Impact on Communities

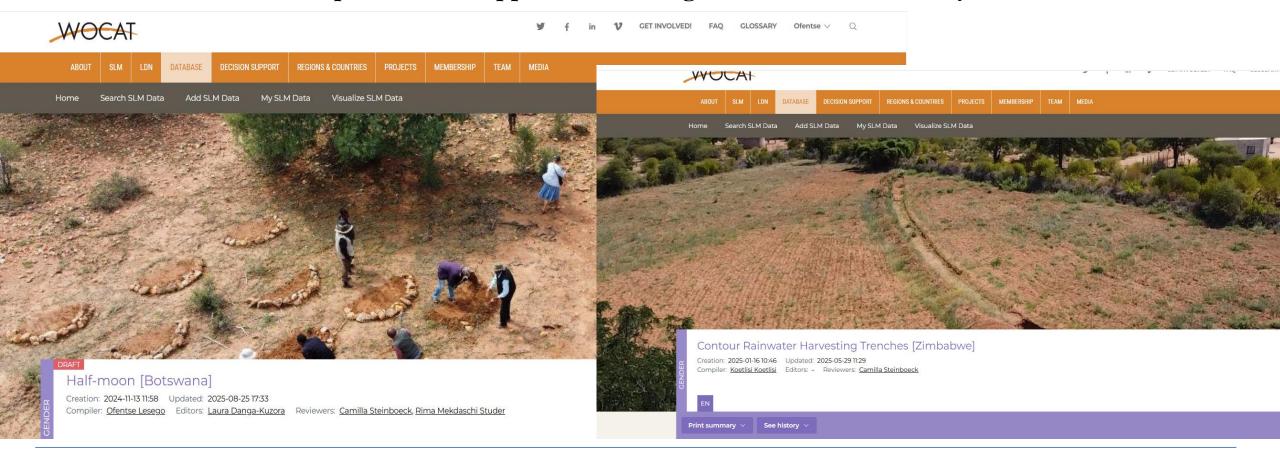

GESI Integration into SLM for Drought Planning

UCCD-WOCAT GESI-responsive Tool application at Mogobane, Botswana & Guyu-Chelesa, Zimbabwe.

Success Factors for GESI Integration

Inclusive Participation –

Ensuring balanced involvement of women, men, and youth in decision-making structures and field activities.

Capacity Building –

Strengthening skills, awareness, and confidence of women and youth to actively engage in SLM practices.

Cultural Sensitivity –

Addressing and transforming social norms and beliefs that limit women's and youth participation.

Leadership Opportunities

 Creating pathways for women and youth to hold leadership and executive roles in committees.

Access to Resources –

Guaranteeing equitable access to land, water, credit, and technical support for all groups.

Monitoring & Accountability –

Establishing genderresponsive indicators to track progress and ensure equitable benefits.

Community Empowerment –

Promoting local ownership of SLM interventions that recognize diverse community needs.

Policy Alignment –

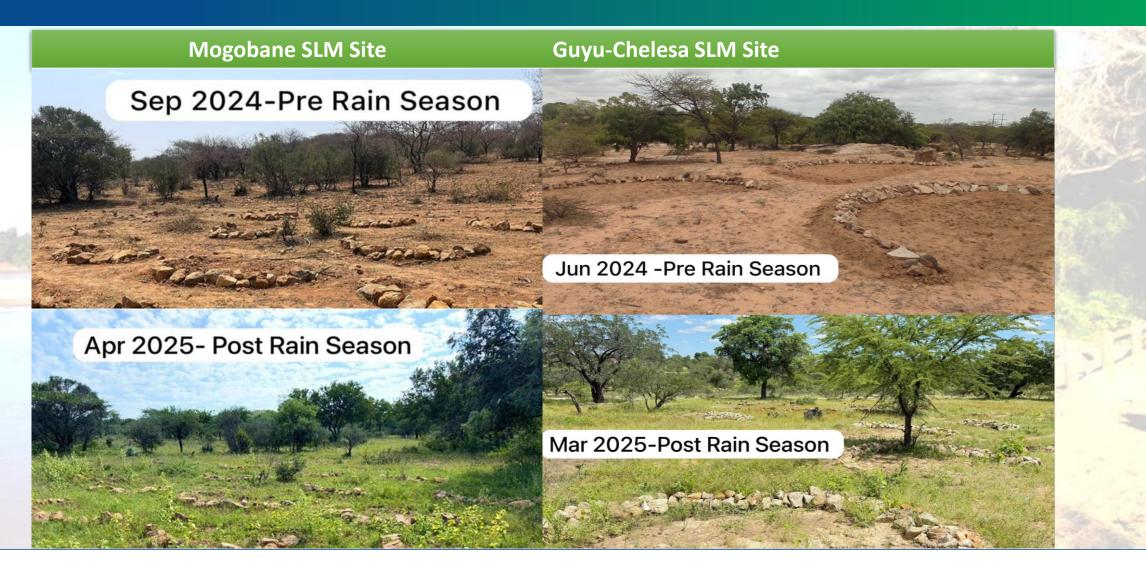

Integrating GESI principles into local and national SLM policies to ensure sustainability.

Present Situation

Impact on Communities: GESI Progress in Bots & Zim

Awareness raised on the need for balanced participation in SLM decision-making.

Baseline established: Men 70% vs Women 30% participation -now 50% and 80% women participation in Bots & Zim respectively.

Recognition that inequity drives land degradation, creating urgency for change –SLM Champions have been identified.

Momentum building to empower women and youth as active leaders in land restoration and adaptation.
