IDMP's Objective is to support stakeholders at all levels by providing policy and management guidance and by sharing scientific information knowledge and best practices for Integrated Drought Management.

Integrated drought management is a critical component of disaster risk reduction, climate adaptation strategies and national water resources policies, bringing together the needs of the different stakeholders affected by drought. In order to address drought issues more effectively, the World Meteorological Organization (WMO) and Global Water Partnership (GWP) launched the Integrated Drought Management Programme (IDMP).

IDMP's approach

- Shift focus from reactive to proactive actions
- Foster horizontal integration by collaborating with partners from diverse sectors
- Facilitate vertical integration between global, regional, national and local levels
- Improve knowledge base with better access to information
- Promote projects that demonstrate innovation
- Build countries' capacity to implement integrated approaches

Integrated Drought Management **HelpDesk** provides tailored support for drought mitigation and resilience
