

# The problem for the Australian livestock industry

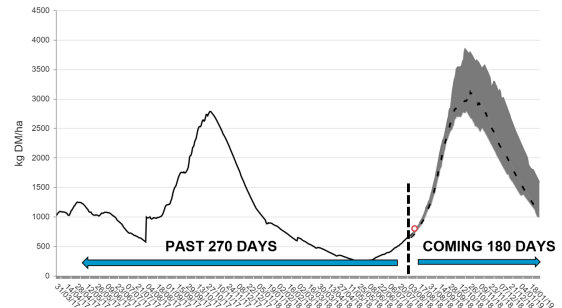

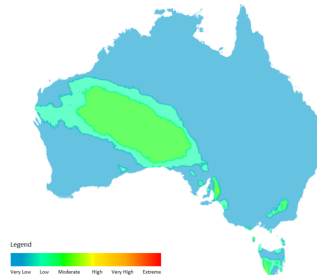

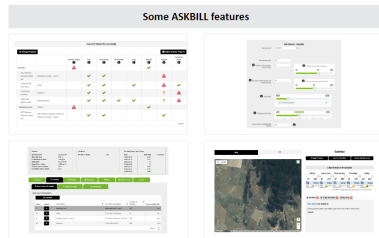

- Climate variability
- Leads to serious loss from diseases and poor pasture production
  - wellbeing and productivity
- Negative impact occurs before visual signs
- Early detection is critical
  - Changing climate is making this more important
- Do not increase workload

# ASKBILL managing the impact of climate variability

ASKBILL web based software provides timely and accurate predictions of sheep wellbeing and productivity using weather, stock and pasture information to sheep producers across Australia

ASKBILL Cold Snap Risk 05 Aug 2018

# ASKBILL benefits

Manage risks in sheep production systems

- Forward plan pasture targets, stocking rates, livestock and carcase performance
- Monitor, react and achieve these targets
- Manage diseases and extreme weather events
- Support and promote IDM Research Centres
